Alur Saif Ali Khan

Software Engineer | Python, Java, REST APIs | Machine Learning

+91-9059926982 | khan1129saif@gmail.com | LinkedIn | GitHub | Portfolio | Guntakal, India

PROFESSIONAL SUMMARY

Software engineering student (Integrated M.Tech, VIT-AP University, 7.96/10 CGPA, graduating 2027) with hands-on experience in Python, Java, JavaScript, Flask, and SQL databases. Built a distributed file storage system with end-to-end encryption, 3x replication, and role-based access control; a machine learning model (RNN/GRU/LSTM) for hourly temperature prediction; and a web application using REST APIs for real-time data. Strong in data structures and algorithms, DBMS, operating systems, and computer networks. Skilled at debugging, testing, and turning requirements into working software. Seeking a software engineering or technology internship to contribute to production systems and keep learning.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, HTML, CSS
Backend & APIs: Flask, REST API Development and Integration, JWT Authentication, Real-Time Data Retrieval, SQLite, SQL, DBMS
Machine Learning & Cloud: RNN, GRU, LSTM, Model Training and Prediction Pipelines, AWS EC2, AWS S3
Security & Systems: AES-256-GCM Encryption, TLS, Role-Based Access Control (RBAC), Distributed Storage, Data Replication
Core Computer Science: Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, DBMS
Practices: Problem Solving, Debugging, Unit and Integration Testing, Code Reviews, Competitive Coding, Teamwork, Git
Spoken Languages: Urdu (Native), Telugu (Native), English (Professional), Hindi (Conversational)

EDUCATION

Vellore Institute of Technology (VIT-AP), Amaravati 2022 – 2027
Integrated M.Tech in Software Engineering (5-year) | CGPA: 7.96 / 10

Narayana Junior College, Guntakal 2019 – 2021
Higher Secondary / Intermediate | 87%

Narayana Group of Schools, Guntakal 2015 – 2019
Secondary School | 96%

PROJECTS

SecureVault: Distributed File Storage and Management System Capstone Project
Python, Flask, SQLite, AES-256-GCM, TLS, JWT, Role-Based Access Control | Team of 4

- Built a distributed file storage system (Flask API gateway, 3 storage nodes) that splits files into 4 MB chunks and encrypts each with AES-256-GCM, with TLS-secured communication.
- Implemented 3x chunk replication with heartbeat monitoring to detect failed nodes and keep files available and recoverable during node outages.
- Enforced JWT authentication and role-based access control (owner, editor, viewer) so users can only access files permitted for their role.

Weather-RNN: Hourly Temperature Prediction Machine Learning
Python, RNN, GRU, LSTM

- Developed and trained deep learning models (RNN, GRU, LSTM) in Python to predict hourly temperatures for a specific location.
- Automated model training and prediction to deliver short-term forecasts, addressing delays and inaccuracies of traditional methods.

Weather Forecasting Application Web Development
HTML, CSS, JavaScript, OpenWeather REST API

- Developed a responsive web app that retrieves and displays real-time temperature, humidity, and wind speed for global locations.
- Integrated a third-party REST API to fetch live updates automatically, removing the need for manual lookups.

INTERNSHIP

Web Development Virtual Internship, Bharat Intern LLP Jul 10, 2024 – Aug 10, 2024

- Completed the AICTE-verified virtual internship program in web development; certificate issued August 24, 2024.
